

## Key Knowledge

We rely on our five senses to exist every day: sight, smell, taste, touch and hearing. Each one of our senses fine-tunes with our brain.

Humans are animals.

Hearing is one of the five senses and we couldn't hear without the help of our ears.

We experience the world through sight and it is one of the five senses. Without sight, we would not be able to view a sunrise.

Our nose is an important part of our everyday life. Think what it would be like to never smell cake baking or the smell of green grass.

Our tongues have multiple uses for us. We need our tongue to form words and talk while at the same time it is used as part of our ability to taste things.

Our skin is considered to be the largest 'organ' of the body.

Human teeth are just as strong as shark teeth.

Our bones and skeleton are needed for our bodies to move.
